DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-20, drawn to a method of heating/forming a fiber tape, classified in class 156, subclass 64.
 - II. Claims 21-28, drawn to a computer program product, classified in class 700, subclass 1.
 - III. Claims 29-35, drawn to a system for controlling fiber tape heating, classified in class 156, subclass 367.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process for using the product as claimed can be practiced with another materially different product, for example the process does not require the use of a computer program with computer readable storage or computer readable program code. Additionally the product as claimed can be used in a materially different process of using that product for example, the program can be used for a different process not requiring the formation or heating of a fiber tape, the irradiating of the fiber tape, etc.

Art Unit: 1733

3. Inventions I and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another materially different apparatus such as one without a memory device. Additionally, the apparatus as claimed can be used to practice another and materially different process, such as a process of controlling heat of another material other than a fiber tape.

4. Inventions III and II are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product, for example the apparatus is used to control heating to a fiber tape for making a composite fiber tape while the product claims are computer program claims that the apparatus claims do not require the use of. Additionally, the product as claimed can be made by another and materially different apparatus, for example, the apparatus claims are directed to controlling the heating of a fiber tape for making a composite fiber tape while the product claims are computer program claims that can be used with a different apparatus.

Art Unit: 1733

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
